“Getting educated and trained in the skills one needs in order to publish research results, hypotheses, and models has never been more important, in particular for young scientists, but also for the more established among us: Wiley has taken an important initiative in developing an online platform that provides that education and assesses participants’ progress. There is no doubt it will help scientists increase the impact of their studies.”

Professor Aaron Ciechanover
Winner of the 2004 Nobel Prize in Chemistry

Wiley Researcher Academy

A comprehensive, online platform pedagogically designed to deliver effective training on writing and publishing to authors across the entire global research community.

- Developing the skills of scientific researchers
- Facilitating networking and collaboration
- Supporting success in research publishing
The Wiley Researcher Academy has been developed to support governments, their academic institutions, and researchers in growing the quantity and quality of published research outputs, primary performance indicators for a country's national science strategy.

The aim of the Wiley Researcher Academy is to enable researchers to be ever more successful in getting their articles accepted by quality, peer-reviewed journals, whether they are international or national titles and regardless of who publishes them. It supports both increased research outputs and higher-quality submissions.

**Key Features**

- Written and presented by a global network of journal editors, industry experts and academic professionals.
- 50+ hours of self-paced, digital learning
- 14 core ‘learning paths’, addressing best practices, processes and trends in publishing
- Rich, interactive media content to motivate the learner
- Learning community spaces for networking and collaboration
- Formative practice opportunities and rigorous assessments to demonstrate understanding
- Customizable curriculum that can incorporate national contributors, culture and issues
- Excellent monitoring and reporting to demonstrate ROI for customers
- Certification available to learners on program completion
- Partnership with Wiley drives ongoing improvements to researcher education

**Core Content**

- Qualities of a successful researcher
- Research and publication: the essential link
- Funding the research project
- Selecting an appropriate journal
- Best practices in writing scientific articles
- Key components of a research article
- Manuscript submission
- Peer review
- Open access to scientific literature
- Managing research data
- Ethical considerations in research and publishing
- Roles of the publisher and journal editors
- Post-publication activities and driving visibility
- Becoming a peer reviewer
